FULL STACK DEVELOPER

Full-stack developer with 3+ years of experience building high-performance web applications using the MERN stack, with hands-on experience integrating AI-driven features into production systems. Specialized in architecting scalable front-end platforms using Next.js and Tailwind CSS, implementing SSR/SSG for SEO-optimized and AI-generated content, and designing backend services that orchestrate AI-assisted workflows. Proven track record of delivering reliable, production-grade systems on AWS, supporting 1M+ monthly users and large-scale AI-powered automation.

SKILLS

Programming: JavaScript (ES6+), Python, HTML, CSS

AI & Automation: LLM Integration (OpenAI / Claude-style APIs), Prompt Engineering, AI-assisted Form & Workflow Automation, LangChain, LangGraph, Pinecone, OpenAI Embeddings

Frontend: React.js, Next.js, Redux, Tailwind CSS, Material UI, Bootstrap, Responsive UI Development, Component Architecture, SSR / SSG, SEO Optimization, Core Web Vitals

Backend: Node.js, Express.js, MongoDB, Mongoose, REST APIs, JWT Authentication, API Design & Optimization, Error Handling, Data Validation, Backend Orchestration

Cloud & Deployment: AWS (EC2, S3, Elastic Beanstalk, CloudFront, Amplify), Docker, CI/CD Basics, Amazon Bedrock

Tools & Practices: Git, GitHub, Postman, Docker, Production Debugging, Code Reviews, System Documentation

PROFESSIONAL EXPERIENCE

Expertia AI

Jan 2023 - Present

Frontend Development

- Developed and maintained a scalable design system for an AI-powered hiring platform, standardizing UI components and interaction patterns across recruiter and ATS workflows.
- Built responsive, AI-ready user interfaces using Next.js, implementing SSR and SSG to efficiently render AI-generated job and candidate content.
- Designed and launched a mobile-first ATS platform with a limited initial feature set, intentionally scoped to validate core workflows and iteratively roll out additional features based on real user feedback and usage data.
- Engineered a maintainable front-end architecture optimized for performance and seamless integration with backend and AI services.
- Designed and developed complex, data-rich dashboards for an AI-driven Applicant Tracking System (ATS), focusing on usability and actionable insights.
- Improved SEO and page performance by optimizing Core Web Vitals for dynamically generated and AI-produced content.

Backend Development

- Orchestrated a multi-system hiring workflow for Reliance Industries, synchronizing job postings via API triggers, aggregating multi-channel candidate applications, and automatically routing shortlisted candidates to ZingHR for downstream HR processing.
- Built a PDF-to-HTML conversion microservice to eliminate slow client-side PDF rendering for resumes, and deployed a CDN-backed distribution using Amazon CloudFront to significantly improve load times and scalability of resume previews.
- Integrated multiple external job boards and hiring platforms, enabling automatic job distribution from Expertia to third-party platforms and ingestion, normalization, and aggregation of incoming candidate data into a unified recruiter dashboard.
- Led integration with Naukri.com, enabling automated job posting for onboarded customers and building a data ingestion pipeline to fetch, normalize, and consolidate external candidate applications into the internal recruiter dashboard.

Applied AI (Workflow Integration)

- Implemented AI-assisted recruiter communication workflows, allowing recruiters to manually draft emails or use an AI assistant to generate outreach emails and reusable templates.
- Designed AI-driven email templating and content generation flows, improving consistency and reducing repetitive manual effort across hiring workflows.
- Built AI-powered normalization and structuring of free-text candidate responses in application flows, converting inconsistent inputs into standardized, filterable data for recruiter dashboards.
- Enabled accurate candidate screening and filtering by transforming unstructured application data into structured fields suitable for analytics and decision-making.
- Built an AI-driven content generation pipeline that created 10k+ SEO-optimized blogs from existing job data, significantly increasing impressions and clicks in Google Search Console.
- Optimized rendering and indexing of AI-generated content using SSR/SSG strategies, ensuring search engines could reliably crawl and rank the generated pages.
- Developing a chat-based MCP server for job posting (beta), allowing recruiters to conversationally provide job requirements and publish jobs without filling traditional forms.
- Implemented orchestration and validation logic to ensure AI-generated job data confirms to required schemas before triggering job-creation APIs.

EDUCATION & CERTIFICATIONS

Bachelor of Civil Engineering

JNNCE - Shimoga 2014-2018

FREELANCE

Contributed to frontend development in Next.js for [Ola Kritrim](#) at the initial stage of the project as a freelance developer.
